## INK-JETTABLE REACTIVE POLYMER SYSTEMS FOR FREE-FORM FABRICATION OF SOLID THREE-DIMENSIONAL OBJECTS

## ABSTRACT OF THE DISCLOSURE

The present invention is drawn toward systems and methods for free-form fabrication of solid three-dimensional objects. In one embodiment, a method can comprise a) ink-jetting a first ink-jettable composition containing a reactive build material and a second ink-jettable composition containing a curing agent separately onto a substrate such that contact between the reactive build material and the curing agent occurs, thereby resulting in a reaction that forms a solidifying composition, and b) repeating the ink-jetting step such that multiple layers of solidifying composition are accrued, wherein said multiple layers are successively bound to one another to form the solid three-dimensional object.
